

SIX-COMPONENT BALANCE (INTERNAL)

RW 239

Description:

Internal balances are tools for measuring the forces and torques applied to the model installed in the wind tunnel. This balance is directly attached to the model. At various points, the strain gauges are mounted for measuring applied forces. Static balances are used to measure static forces. This balance consists of 3 components including drag, lift forces and pitching moment.

Specifications:

- Measuring drag, lift and side forces and pitching, roll and yaw moment
- Equipped with strain gauge
- Capable of connecting to different models
- Specified software for datalogging and calibration
- Installation and training video included
- Instructions manual included
- 10-year warranty

Note: Direct contact with the sales department is required to confirm the last updated technical specifications and pictures.

Applications:

1. Measuring applied forces on the test model
2. Effect of angle of attack and air velocity on applied force magnitude
3. The effect of speed on force components

Required For Operation:

- 220 v Single Phase Electricity
- Desirable Temperature (°C): 10-30
- Relative Humidity: 50%

SIX-COMPONENT BALANCE (INTERNAL)

RW 239

Dimensions (L*W*H) mm:300x 30 x 30
